The Importance of Breaking the Stigma

Working aged men (25-54 years old) account for the largest number of suicide deaths in the U.S. These men are also the least likely to receive any kind of support. They don't talk about it with their friends. They don't share with their family. And they sure as heck don't seek professional treatment.

They are the victims of problematic thinking that says mental health disorders are unmanly signs of weakness.
