

Summer Suncare

We've got you covered... *naturally*

What's on your summer bucket-list?

What are the benefits of the sun?

Suggestions to Stay Safe in the Sun

Seek Shade or Stay Indoors from 10 am to 4 pm

Wear a Wide-Brimmed Hat

Wear Protective Clothing

Wear Sunglasses with 100% UV Protection

Use Sunscreen That Is SPF 30 or Higher. Reapply often.

Reasons to Avoid Chemical Sunscreen

- Some chemical sunscreen filters can degrade when exposed to UV rays, generating free radicals.
- Certain active ingredients can cause skin allergies.

Reduce Toxicity

- A toxin is any substance that places undue stress on the body.
- When it's functioning properly, your body is efficient at minimizing your toxic load, but it becomes less efficient at managing toxins as the load increases.

Benefits of Mineral Sunscreen Filters

- Mineral sunscreen filters serve as a physical barrier, reflecting UV rays for broad-spectrum protection.
- They don't degrade when exposed to UV rays.
- They're effective immediately.
- They're safe for all skin -types.

What Does Reef-Safe Mean?

- Terms like reef-safe or reef-friendly mean the sunscreen doesn't contain oxybenzone and octinoxate.
- Studies show these UV-blocking chemicals can cause coral bleaching.
- When coral bleaches, it's still alive but under severe stress, which leaves it susceptible to disease and death.
- **All dōTERRA® sun products are reef-safe.**

Which dōTERRA® sun products do you need in your summer bag?
