

Hello my name is Grant. I'd like to create something beautiful and enjoyable for our neighborhood. I'm a widower (3years now) I own a home on Jenny Lane in my the old Jeter farm area of Raymore with my three young sons (8,12,and 15) . This project will also provide our neighborhood with free crypto and a model to sustain its income.

I'd like to build a fruit and vegetable bearing garden for the neighborhood. My plan is to beautifully landscaped it and create a stunning space for everyone to enjoy. This will be a beautiful garden with a variety of fruits flowers and vegetable . I imagine the kids getting off the bus and running to the garden to get fresh fruit while they play in the garden. I also want to create a small neighborhood market with all of the revenue going to the neighborhood. This will help to drive the value of the crypto currency and teach kids not only about crypto but also finances and managing resources efficiently and fairly.

All of the produce would be free to our neighborhood. I've been in finance a long time and I can already see food shortages. I also see neighbors that are scared and wanting to have that familiar old school connection we used to share . My sons and I will build and maintain it for everyone. We, of course would love volunteers to water it and help here and there .

We only ask that it remains a free center for learning , fun and enjoying natures gifts . The garden will also be a summer learning center in which we will bring in animals and teachers for the kids (I have three sons 8, 12, and 15) I'm placing this add because I'd like to ask for some help in organizing this and finding resources . I also plan to create a crypto currency for our neighborhood as a way to raise capital to beautify it and create lasting enjoyment . Please reach out and I can share more information. This year don't just give for Christmas..think about giving in a way that is self sustaining .. after all that's how nature provides.

The Garden has three objectives: and the 1.) to make the neighborhood more meaningfully connected 1.) To teach us about our connection with Nature in ways that will continually surprise you. 2.) To Learn ways to live a happy and wholesome life through the understanding of our connection with nature. 3.) To teach young ones self reliance and to help them to see their unbreakable inner fortitude through daily activity such as running a business, and interacting with others in kind ways without surrendering their independence and boundries.

I'm naming it Maza or Mazaroth Garden .. Mazaroth refers to natures Ordinances
