

At Swift our number one priority is **your safety** and getting you to your “*most important stop*”.

Being prepared with **properly adjusted mirrors** and knowing how to **chain your tires** *before* severe winter weather is *essential*.

## Mirror Adjustment

It is important to have your **mirrors adjusted**, before driving your truck, in order to assist you in seeing different angles keeping yourself safe and able to prevent possible incidents. **Remember, properly adjusted mirrors are only useful if used.** *Check mirrors every 4-6 seconds.*

## Tire Chaining

Commercial truck driving during **adverse weather conditions** can be very *challenging* and *stressful*, especially during the winter months and at higher elevations. States in the **West** and **Northwest** regions **require** commercial motor vehicles to carry tire chains during specific periods during the winter.

Many **Swift Terminals** offer **mirror adjustment** and tire **chaining stations**. Below you will find lists of **locations** for each, at each location go to the **T-Call window** and they will help you with these.

Mirror Adjustment Terminals			
Albuquerque, NM	Gary, IN	Manteo, IL	Richmond, VA
Atlanta, GA	Greer, SC	Memphis, TN	West Valley City, UT
