

UNLOCK YOUR BODY'S NATURAL ABILITY TO PRODUCE HEALTHY NEW SKIN.

Procell Therapies offers cutting-edge biotechnology to induce a breathtaking transformation to the appearance of the skin that can last a lifetime.

Q: WHAT IS MICROCHANNELING?

A: Microchanneling is a noninvasive procedure designed to stimulate your body's own natural ability to generate collagen, elastin, and other building blocks of healthy skin. By stimulating the outermost layers of the skin, microchanneling can help your body start this process without penetrating into living tissue.

Q: DOES IT HURT?

A: With minimal physical discomfort, most clients are able to do the procedure without numbing cream and without any noticeable pain. There is no lingering discomfort, and we have a number of strategies we employ to minimize discomfort during treatment. Post-procedure, most people report a "tight" feeling in their skin.

Q: WHO CAN DO THIS TREATMENT?

A: As ProCell microchanneling treatments are minimally invasive, they are also safe for all skin types. Whether you are fair-skinned or dark, and even if you experience chronic breakouts, properly conducted microchanneling treatments will not result in hyperpigmentation, keloid scars, or other lasting negative side effects.

Q: WHAT'S IN THE SERUM?

A: ProCell's Microchannel Delivery Serum contains bone marrow-derived growth factors in a hyaluronic acid suspension. Both of these elements are naturally-occurring in the human body. There are no human, animal, or plant cells, DNA, blood, or any other foreign substances. The product has been used safely and effectively for over a decade.

Q: WHAT SKIN CONDITIONS WILL THIS HELP WITH?

A: Microchanneling treatments can improve the appearance of fine lines and wrinkles, hyperpigmentation, acne scarring, stretch marks, and rosacea.

Q: MY SKIN IS IRRITATED. CAN I USE MOISTURIZER?

A: It is normal for treatments to result in some skin irritation, especially for clients with more sensitive skin. Always wait a minimum of 90 minutes before putting anything else on the skin. During this time it is normal for the skin to remain pink or light red. After the 90 minutes you can apply additional moisturizer or other products. Keep in mind however, that as your skin may be more sensitive than usual for several days after the treatment, especially strong topicals should be avoided until the skin returns to normal.

Q: HOW LONG BEFORE I CAN EXPECT TO SEE RESULTS?

A: Though neocollagenesis (the production of new collagen) can take several weeks, it is not abnormal to notice an improvement in the quality and appearance of your skin within the first 24 hours. After 2-3 treatments a thicker more robust, collagen filled cellular matrix will produce more consistent and noticeable improvement. And 6 or more treatments may be recommended for scarring, laxity and wrinkles.

Q: ARE THERE ANY CONTRAINDICATIONS?

A: If you have any underlying condition that significantly impairs your immune system, it is a good idea to avoid microchanneling. Examples include but are not limited to active radiation or chemotherapy, uncontrolled diabetes, chronic inflammatory skin disease, Accutane in the past 2 years, hemophilia or similar bleeding disorder. Also anyone with stainless steel allergies should not do this treatment. We also discourage treatments for those who are pregnant or nursing.

Q: DO I HAVE TO USE THE MICROCHANNELING SOLUTION / AFTERCARE SERUMS?

A: Thoroughly cleanse treated areas and apply Cellular Renewal Serum (Step 1) Wait 30 seconds and apply healing accelerator serum (Step 2) Wait for serums to full absorb (1 minute) and can apply nighttime moisturizer. Use these serums until they run out- close to a months supply.

HOW TO PREPARE FOR YOUR TREATMENT

- *It is recommended to avoid sun exposure for 48 hours in advance of your treatment.*
- *Please wait 10 days after getting botox and 2 weeks after getting fillers before doing Procell.*
- *If you have frequent episodes of cold sores, taking Acyclovir or Valcyclovir starting one day prior to your Micro-Channelling will reduce the likelihood of a recurrence due to your treatment.*
- *Discontinue Retinol (2% or higher) or Tretinoin at least 3 days prior to treatment.*
- *If your liver, kidneys and immune system are healthy, taking an NSAID such as Ibuprofen before treatment may reduce your discomfort.*
- *If possible, please arrive at our location without makeup and with clean face.*
- *If you are being treated for hair loss, please arrive at the office with the shortest haircut possible. Please do not apply sprays or gels to your hair prior to your treatment.*
- *If you are being treated with PRP or PRF, drink an extra 24-32 oz. of water for 2 to 3 days prior to treatment.*
