

MONTHLY RISK AND RECONCILIATION FORECASTING ("MMR ADJUSTED")

Many Medicare Advantage plans and risk-bearing providers struggle to accurately and promptly process the CMS MMR. This leads to:

- Lagged ability to reconcile with the CMS picture of risk revenue
- Potential disagreement between the plan estimate and the CMS picture
- Additional complexity and difficulty doing risk and finance analytics using MMR data

HDD's Monthly Risk and Reconciliation Forecasting Toolkit provides:

- A foundational data source that can be used for reconciliation and risk revenue forecasting
- An extremely accurate picture of CMS' risk score estimates
- Reduced reconciliation errors and report lag
- Automates and simplifies the 50+ adjustments that need to be made to each record
- A SQL toolkit that's easy to integrate into data warehouse

DELIVERY OPTIONS

- We can set up the toolkit in your environment and test it and hand it off
- We can provide full-service analytics based off of it
- We can train your analytics staff to use it and provide knowledge transfer
- We can help integrate it into your data warehouse and reporting systems and provide UAT support
- We can also deliver the toolkit for your engineering team to integrate while we provide wrap-around consulting services to speed integration and adoption

BENEFITS

- A historical record of risk adjusted payments after all adjustments are applied
- A final table based on the monthly flat files Medicare Advantage plans receive from CMS indicating payment for members enrolled with the contract
- Tracking of the retroactive and current adjustments as accurately as possible
- A critical foundational data source for all retro and prospective risk operations and analytics
- Ability for an existing risk vendor to utilize on premise or in a SaaS environment

Health Data Decisions empowers health plans and providers with data integration, sharing, and optimization expertise for Risk Adjustment, Star Ratings, HEDIS®, and Value-Based Care. Partner with us to unlock your organization's full potential in the competitive healthcare landscape.
